ABSTRACT:

PROBLEM TO BE SOLVED: To provide a system for preventing a trouble and a crime caused by abuse of ID and password of another person or a wicked seller.

SOLUTION: A seller or the responsible person of an enterprise registers one's own fingerprint in a computer for transmitting and controlling information. A customer user registers one's own fingerprint by touching a registration checking-up space arranged on an image screen o the Internet or a cellular phone connected to the Internet for protecting oneself from transaction trouble on the Internet. The subjects are confirmed by an electronic checking-up space at contract or price settlement time by the recorded and preserved fingerprints of both contractors to thus secure security and safety in this electronic commercial transaction.
